professional 64 bit free download no key 2019.[Effect of thymus humoral factor (THF) on proliferation and function of T lymphocytes]. The influence of thymus humoral factor (THF) on proliferation and function of T lymphocytes were examined in vitro. Addition of purified THF to lymphocytes stimulated with the second signal (anti-CD3) and mitogens (PHA and Con A) inhibited their DNA synthesis. The suppressive effect was dose-dependent, and the effect was greater with anti-CD3. This effect was almost reversible by removal of THF. The suppressive effect of THF was due to non-specific decrease in cell number, but not due to cytotoxicity. The number of T cells in spleen, lymph nodes, Peyer's patch and mesenteric lymph node was not decreased by the treatment with THF. The function of THF was also examined by measuring the amount of interleukin 2 (IL2) and IL2 receptor (IL2R) on T cells. Treatment with THF did not influence the expression of IL2 or IL2R in activated T cells. These results indicate that THF can selectively inhibit the proliferation of activated T cells in response to the second signal and mitogens without affecting the functions of THF-responding cells.

Adsorption of anionic surfactants onto the magnesite surface: implications for the prevention of industrial pollution. The adsorption and distribution of three anionic surfactants, sodium dodecylbenzene sulfonate (SDBS), sodium dodecyl sulfate (SDS), and sodium dodecyl sulfonate (SDST) onto the magnesite surface, were studied with batch experiments and the combined techniques of zeta-potential measurement, pH, Fourier transform infrared spectroscopy (FTIR), X-ray diffraction (XRD), and Brunauer-Emmett-Teller (BET) methods. The experimental results showed that the adsorption of SDBS was more easily observed than that of SDST and SDS. The adsorption of SDBS onto magnesite surface followed the order of pH > Mg(2+) concentration > Mg(2+) dose > Mg(2+) dosage > solid/liquid ratio > particle size. The adsorption of SDST and SDS followed the order of solid/liquid ratio > pH > particle size.
